User story Case

They both sync their devices with the App

Daughter is upset and feeling homesick

Daughter is going to study abroad

The daughter creates a list of things to do when she feels homesick on the App

She opens her homesick list and completes some of the items (mums device goes red)

Daughter gets to uni but feels homesick rings mum a lot upset.

Daughter is waiting to call in the day (mums device is light)

Mum rings daughter

They buy the Homesick device and download the app

Daughter goes to sleep (mums device goes dark)

Prototype

Device Prototype

Both users have a device that glows. The device reads the brightness of the users environment. The brightness value is sent to the partner device and controls the brightness of the glow. This allows users to track the others behaviour such as; sleep patterns.

User Testing

User Testing

The final prototype was tested on the target audience. One male and two female international students were shown the prototypes.

Female users liked the idea and would use it with their parents or friends. The male user would not use it with his parents but would consider using it with his partner.
